

First screen

I have logged in as administrator and want to see report. I have done all the necessary changes like group management, organization, company rule.

This admin is a node I have created in user management.

The screenshot shows a web browser window displaying a report interface. The URL is `reliance.e-clide.com/app/ore/index.php/modname=reports&op=reportlist&ot_platform=ims`. The user is logged in as Mithagare Mohan on 10/02/2015 at 18:35. The interface includes a navigation menu with 'Main', 'E-Learning', and 'Jump to LMS'. The main content area is titled 'Report' and features a search filter set to '(All)'. Below this is a table with the following data:

Name	Created by	Creation date	Public	Print	Export	Refresh	Delete
Report - Client	relianceadmin	10/02/2015 18:31	<input checked="" type="checkbox"/>				

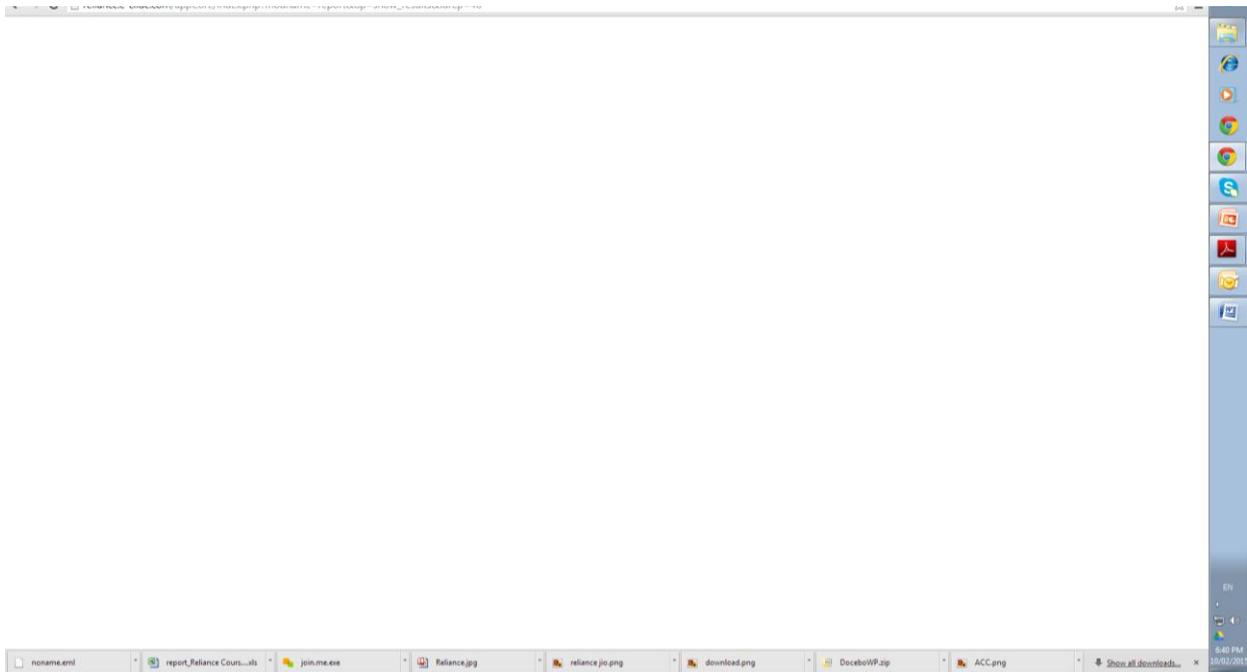

A red box highlights the action icons for the 'Report - Client' row, and a black arrow points to the 'Public' checkbox.

Imagine the user is my client and he has his own user, we have given curricula and in curricula three courses.

Once he create user of his company he wants to see the report for his users.

Problem

Admin visit to Report section click on customize report and he sees the blank screen.

But if I login as superadmin I can see the same report please help
